

LAB EXPERIMENT – PART 1

Performance Analysis Using Type-1 Hypervisor

Proxmox VE

CPU Performance Analysis of an Ubuntu Virtual Machine using Sysbench

Name	Mehak Sayed Yusuf
USN	01FE24BCI012
Division	B
Roll No.	202

1. Aim

To create and verify a virtual machine on the Proxmox VE Type-1 hypervisor, inspect its CPU, memory and disk configuration, monitor resource utilization, and measure CPU performance using Sysbench.

2. Experimental Configuration

Parameter	Configured / Observed Value
Hypervisor	Proxmox VE (Type-1)
Guest OS	Ubuntu 22.04.5 LTS
CPU allocation	1 socket, 2 cores = 2 vCPU
CPU model	QEMU Virtual CPU version 2.5+
Memory allocation	2048 MiB (2 GB)
Virtual disk	20 GB
Network bridge	vmb0
Virtualization vendor	KVM

3. Procedure

1. **Access Proxmox VE:** Open the Proxmox VE web interface and sign in with the assigned credentials.
2. **Create the VM:** Use the Create VM wizard. Configure Ubuntu as the guest OS and allocate 2 vCPU, 2 GB RAM and a 20 GB virtual disk.
3. **Configure networking:** Attach the VM to the vmb0 bridge using the default/VirtIO network model.
4. **Install Ubuntu:** Start the VM from the Proxmox console, install Ubuntu, restart, and log in.
5. **Verify the VM:** Run `hostnamectl`, `lscpu`, `free -h` and `df -h` to verify the operating system, CPU, memory and disk.
6. **Monitor resources:** Run `top` to observe CPU utilization, memory utilization, processes and load average.
7. **Install Sysbench:** Update the package repository and install Sysbench.
8. **Run CPU benchmark:** Execute `sysbench cpu --cpu-max-prime=20000 run` and record the performance statistics.
9. **Monitor from Proxmox:** Use the VM Summary page to observe CPU, memory, network traffic and disk I/O.
10. **Shut down:** After the measurements, shut down the Ubuntu VM using `sudo poweroff` or the Proxmox shutdown option.

4. Commands Used

```
hostnamectl
```

```
lscpu
```

```
free -h
```

```
df -h
```

```
top
```

```
sudo apt update
```

```
sudo apt install sysbench -y
```

```
sysbench --version
```

```
sysbench cpu --cpu-max-prime=20000 run
```

```
sudo poweroff
```

5. Observed Results

The supplied screenshots provide the following measurable observations from the Ubuntu VM and Proxmox VE dashboard.

Metric	Observed Result
Operating system	Ubuntu 22.04.5 LTS
Architecture	x86_64
Virtual CPUs	2 CPUs / 2 cores
CPU model	QEMU Virtual CPU version 2.5+
Hypervisor / virtualization	KVM; virtualization type shown as full
Memory	Approximately 1.9 GiB total reported by free -h; Proxmox VM configured with 2.00 GiB
Disk	20 GB virtual disk; df -h shows a 20G root filesystem
Sysbench execution time	10.0005 s
Sysbench total events	15,877
Sysbench events per second	1,587.47
Sysbench minimum latency	0.59 ms
Sysbench average latency	0.63 ms
Sysbench maximum latency	1.34 ms

6. Resource Utilization Observations

The Proxmox VE screenshots show the VM running with 2 vCPUs and 2.00 GiB of allocated memory. The CPU graph shows short periods of increased utilization during activity, while the memory graph shows usage rising to roughly 1.8 GiB. Network traffic contains a pronounced transient spike, and the Disk I/O graph shows read/write activity during the observed period.

7. Result and Conclusion

Part 1 was completed on a Proxmox VE Type-1 hypervisor. The Ubuntu virtual machine was configured with 2 vCPUs, 2 GB RAM and a 20 GB virtual disk. The VM configuration was verified using standard Linux system commands, and resource utilization was monitored both inside the guest and through the Proxmox VE management interface.

For the supplied Sysbench CPU run, the VM completed the benchmark in 10.0005 seconds and processed 15,877 events at 1,587.47 events per second, with an average latency of 0.63 ms. These values form the Type-1 baseline for comparison with the Type-2 hypervisor in the next part of the experiment.

8. Screenshots / Experimental Evidence

All screenshots supplied for Part 1 are included below in the same evidence set. The images document VM identification, CPU/memory/disk inspection, Sysbench execution, and Proxmox VE resource monitoring.
